

About Plan4Flex

Plan4Flex focuses on recruitment agencies dealing with complicated planning issues or often changing personnel planning. They help employment agencies to organize their time registration more accurately, faster, and easier with an app. As a result, work, transport, and accommodation come together in one operational system for registration and remuneration processes, from registration to the final pay slip.

About EasySecure

EasySecure is a specialist in the field of identity management. Its scalable cloud platform integrates and delivers access control, time, attendance, and visitor registration solutions. Users can choose from wireless cylinders, door fittings, lockers, card readers, keypads, license plate registration, finger scans, and facial recognition. Registration is possible via a mobile phone, card, tag, face, finger, license plate, and code.

Entanglement of separate systems

Many companies still work with various self-contained systems for time registration, payroll, and access control. These systems often need to be integrated. Organizations have a fragmented picture of hours worked, and there is a growing chance that the ratio between planned and actual hours is incorrect. Moreover, there needs to be a better overview of who is walking around a building or a location at any given time. Furthermore, registration processes take up unnecessary time without proper integration between systems.

Two partners, one solution

The joining of forces between Plan4Flex and EasySecure ensures that recruitment agencies no longer have to deal with a proliferation of different and poorly integrated systems. From now on, you will work with only two partners and a solution that effortlessly merges time registration and access control into a straightforward system. Where Plan4Flex uses an app to register hours, you can also combine time registration and access control with robust and high-quality hardware thanks to the integration with EasySecure.

By combining Plan4Flex and EasySecure, you benefit from various advantages:

- Two parties that relieve you of your worries and offer a complete solution instead of all separate systems and partners.
- You do not have to purchase a separate access control system and therefore do not have to transfer all employee data to new software.
- No double data entry. Hours are always registered correctly, and employees and visitors are given the correct access rights to a building or site.
