## Solutions for Edeka- The difference with EasySecure

Integrated overall package with Pepperr - the planning package of Edeka Rhein Ruhr and time registration by EasySecure.

# Edeka Schenke - A piece of North Rhine-Westphalia

Edeka Schenke was already founded as a small grocery shop in Rheda-Wiedenbrück in 1934. Since then has the small family business grown a lot. To a total of seven stores with organic markets, manufactory and beverage markets. A lot has happened in these past years.

As the businesses grew, so of course did the workforce. It quickly became obvious that simply recording working hours on timesheets was not only time-consuming and error-prone, but also unprofitable at the same time. The need and the desire for more overview and control grew ever clearer.

At this point, Edeka Schenke was already working with Pepperr, Edeka Rhein Ruhr's in-house software planning package. Pepperr supports store managers and owners in the sensible planning of their employees. It is possible to see which employees have certain qualifications and at the same time track how many hours have already been worked. Of course, the working hours of pupils, students, full-time and part-time employees are also taken into account accordingly.

It quickly emerged that an integration of EasySecure and Pepperr would bring a gigantic gain in time savings, convenience, flexibility and overview. Thus, the Edeka planning package approached EasySecure and proposed cooperation.

# No sooner said than done.

Employees from Pepperr are maintained fully automatically in EasySecure. This means that planned working times are automatically matched with the actual times worked. No annoying double entry or errors in the transfer of timesheets. The system also works across locations and is role-based. The store manager only sees the information for his own shop, but the owner can see all data for all locations. "The coupling of EasySecure and Pepperr works seamlessly. I can conveniently view all important information whenever I want," says Robin Schenke.

In addition, employees get the flexibility to clock in and out at multiple locations, for example, if they work not only at the supermarket but also at the adjacent beverage market. This was also one of the reasons why Mr. Schenke opted for this all-in-one solution. "There is no more time wasted asking for timesheets or checking who worked in which department and when. Everything is completely clear and easy to track," says Schenke.

The path from the offer to the order was short and within a few days the manufactory in Gütersloh in Henry Ford Straße could already be equipped. In the following weeks, the stores in Harsewinkel and another branch in Gütersloh followed. The employees also quickly got used to the new (stamp) system and have recognized the benefits.

After about one year of operation, we can draw the first conclusion. "The road was not always easy and at the start there were minor problems here and there, but Pepperr and EasySecure were always there and could help immediately. The strength of the partners is clearly the communication and the short distances. In case of problems or questions, someone was always available immediately," says Mr. Schenke.

In the meantime, all Edeka stores of the Schenke family are equipped and fully functional.

### **Personal service and short communication channels**

"The strengths of EasySecure are the personal service and the short communication channels. They think along with the customer so that you can get the best out of the product. Are there any problems? Then they will get in touch with you immediately"

# Access control

With EasySecure, times can be recorded, but access can also be controlled. This avoids the annoyance of asking who has the key at any given time. Access to certain rooms is only granted to the appropriate personnel. At the push of a button, it is possible to regulate who has access to which rooms, when and at what time.

If an employee leaves the company, access rights can be withdrawn within seconds.
