LESS COST & MORE CONTROL

CASE STUDY BOOKING EXPERTS

The digital revolution has not left the leisure sector unscathed. Modern technology offers more and better ways to improve reservation and access systems so that holiday parks, hotels and other facilities of the leisure sector can focus even more on hospitality. The partnership between Booking Experts and EasySecure shows how digital solutions for access control and reservations complement each other. Read more about the partnership in this article.

Software for holiday parks and hotels

Booking Experts produces software for holiday parks, hotels and in fact for all businesses directly related to leisure and holiday accommodation rental. Examples are reservation systems, channel management (transfer of bookings to other parties), inventory and websites. For the latter, Booking Experts has its own CMS system. In addition, the company can also take care of marketing for clients who use Booking Experts' system.

Get to know EasySecure

Booking Experts encountered EasySecure through a request from a client. They wanted to combine the software with a good solution for digitising door locks. As this is one of EasySecure's specialities, both parties matched each other. Because EasySecure is also completely cloud-based, the company's working methods and products are closely aligned with Booking Experts' vision.

The integration between the systems of Booking Experts and EasySecure has already been realised for one client, but there are plenty of new projects in the pipeline. EasySecure and Booking Experts are also looking for more suitable partners to create a triptych that will take system integration to an even higher level. In any case, the demand on the market is there.

Access Control

The cooperation between EasySecure and Booking Experts mainly focuses on linking access control solutions with systems for managing bookings, reservations, and registrations. However, EasySecure's portfolio also includes many other services and products that are very interesting for the end user. Think, for example, of staff registration and access control for technical services, cleaning services and caterers.
