LESS COST & MORE CONTROL

CASE STUDY YOURSOFT

EasySecure is active in various industries and has already helped many companies perfecting their registration processes and access management. In this customer case we highlight the collaboration between EasySecure and software developer and supplier YourSoft.

About YourSoft

YourSoft is a software developer and supplier that specialises in the supplying business applications for various industries. The world of transport and logistics is the core business of YourSoft. For this sector the company supplies the PayHours NG application, a solution aimed at processing and translating journey data from vehicles in accordance with the regulations of the transport collective labour agreement. The application translates this data into hours and allowances to be paid. YourSoft offers the result (the CAO calculation) to the salary administration of the client. YourSoft also supplies several additional modules, such as its own salary administration and HRM module.

All modules together form an all-in-one ERP for the transport sector. The advantage of that solution is that the YourSoft offers the result (the CAO calculation) to the salary administration of the client. YourSoft also supplies several additional modules, such as its own salary administration and HRM module.

Complementing each other

A transport company has several drivers and auxiliary staff with various different roles. Think, for example, of office, warehouse, and storage staff. In addition, there are also drivers who also work in the warehouse from time to time. And transport companies of course also have non-driving personnel. EasySecure, as a specialist in time registration of non-driving personnel, is the party that plays an important role in the registration of hours and roles of this employee group within the transport sector.

EasySecure's work provides an extra piece of information that complements the data YourSoft already has based on the driving data provided by devices such as on-board computers or PPP. This bundling of data enables the client to monitor and manage the hours of the entire workforce. A customer also gains more insight into the course of logistic processes. What do the drivers do during a trip? Can the process of loading, transport and unloading perhaps be even more efficient?

EasySecure also offers the possibility to extend time and attendance with smart solutions for access control (smartphone, fingerprint, keycard, tag, code, facial recognition, QR code or license plate) and time and attendance. These extensions work in the cloud and can be easily rolled out in one or more locations in different countries.

Mutual customers

YourSoft and EasySecure encountered each other through a client (Brouwers Transport) who had been working with the solutions for some time. When Brouwers started working with EasySecure, YourSoft was asked whether a partnership with EasySecure would be interesting. YourSoft answered this question with "yes". One of the reasons why EasySecure is such an interesting partner for YourSoft is the fact that they have a nice model which is cloud-based. An API web service ensures that YourSoft has a direct link with EasySecure's time registration system.

On the other hand, EasySecure also often gets the question from its client base whether it has a specific solution for the payroll part. And then the link with YourSoft is quickly made, of course. This creates a powerful interaction from which both parties' benefit. The time between the initial contact and the conclusion of the partnership was only a few months, partly due to the mutual enthusiasm and the feeling that both companies could really mean something to each other.

Why YourSoft and EasySecure

There are several reasons why transport companies choose YourSoft and EasySecure. Many companies still use paper or only partial solutions for handling logistic processes and the associated payroll but want to digitize this process quickly and efficiently.

Sometimes it is also a matter of replacement. For example, transport companies want to expand, or are not satisfied with the solution they already have or are getting other devices in the vehicle or want to work more automated.

But what does a transport company achieve by choosing the YourSoft and EasySecure combination? In practice we see first a considerable gain in time. Too much manual work or partial solutions are slow. For example, are there drivers who only come to the office once a week? Then you only have insight into the hours worked at that time.

A direct link to the device in the vehicle ensures that the information is always at hand in real time and therefore also is faster with the hours that you can invoice. The process that starts with reading data and ending with the actual salary and invoicing goes a lot faster. In addition, there is of course a piece of extra insight and reliability. The manually copying travel data and written paper timesheets is prone to error.
