LESS COST & MORE CONTROL

# Uniform identity management for holiday parks, leisure, and hotels

---

Tourism and recreation are sectors that not only represent considerable economic value (the entrepreneurs of the broad hospitality industry are responsible for a turnover of about 91.2 billion and over 800,000 jobs): They are also industries that provide the much-needed dose of enjoyment and relaxation that everyone needs from time to time.

This also includes a sense of hospitality. Visitors to a holiday park, a recreation park or a hotel need quick and easy access to their holiday home, their room and all the other facilities in it. A good management in the form of a good access system is the key to such an experience. It is also important that organisations in the leisure sector have good systems for time and attendance (both guests and staff) and access control for staff and suppliers.

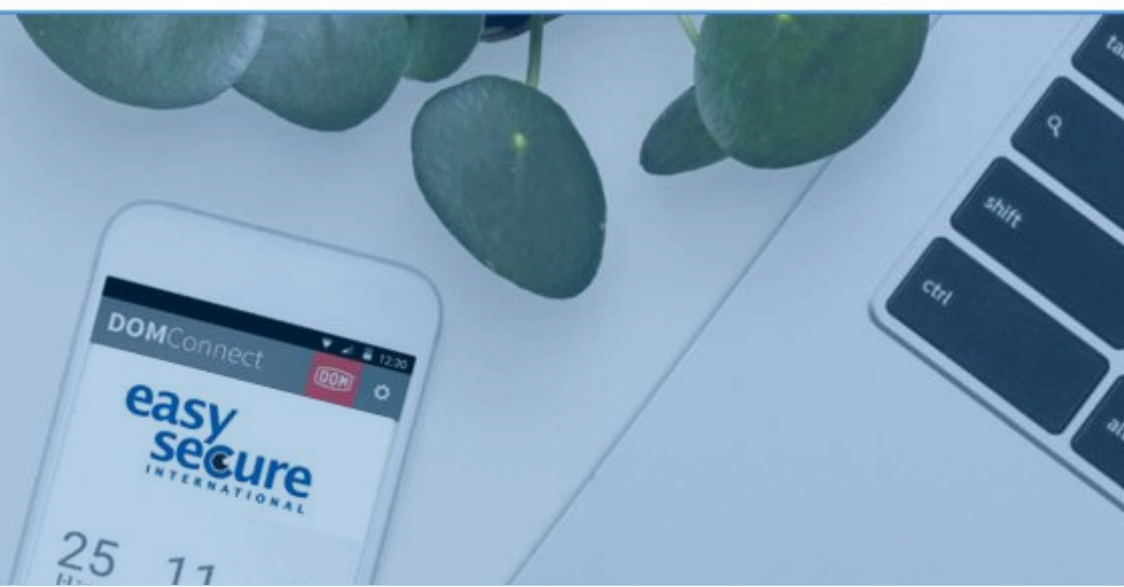

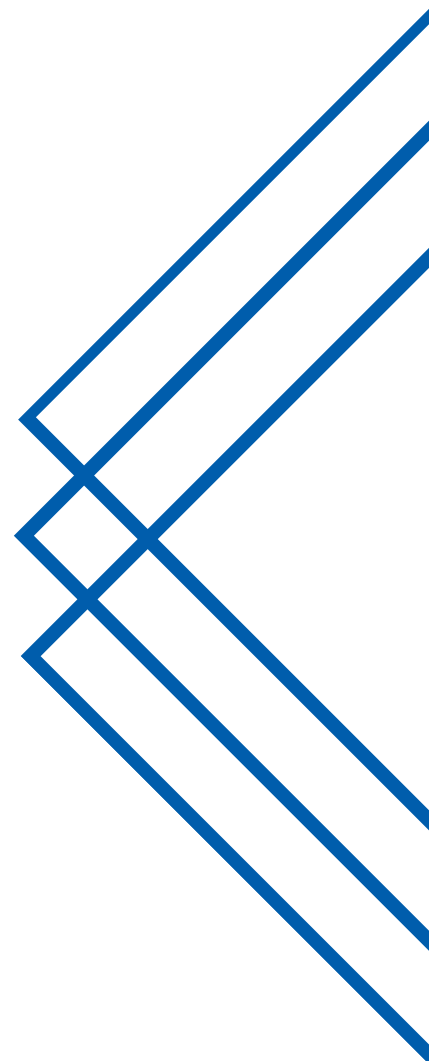

Traditional access management in the world of holiday parks, hotels, appartements and B&Bs is a labour-intensive and time-consuming task. The bookings are often made manually through the access control reservation system, meaning that guests have to wait some time on arrival to gain access to their room, holiday appraisements and the facilities of the park or hotel. Systems for controlling staff access or registering working hours are often isolated islands in the diverse IT landscape of holiday parks or hotels.

# Automate and integrate with EasySecure

---

How nice it would be if you had a range of solutions that fully address the industry-specific challenges of the leisure and hotel industry? A system that also works as a unit, so that access control, time and attendance plus the ultimate offer in hospitality are working together as an integrated solution that you can easily manage in one space. The good news? EasySecure offers just that. Read on and find out everything about our complete package for visitor registration, access management and time registration in the dynamic world of holiday parks, hotels, and leisure facilities.

# Access control

---

Hospitality is a matter of principle for companies in the leisure sector or the hotel industry. It is important that guests feel comfortable when they arrive at the entrance of your holiday park or hotel. A visitor-friendly access system is an ideal way to make a good first impression. Do you want to prevent guests from standing in a long queue in front of the barrier when they arrive at the car park? And do you want to give them the opportunity to go straight to their hotel room or home without having to fill out a mountain of paperwork at reception? Then an access system from EasySecure is the solution.

Register the guest in your cloud environment and immediately send him/her a mobile access card via email. As soon as your visitor arrives, he/she can use a mobile card (keycard), a QR code, a finger scan, a number plate or a facial profile (a personal photo is converted into a secure facial image) on the smartphone to gain access to a room, a holiday flat or the various leisure facilities on a site or in a building.

Because EasySecure's access control solutions are wireless, you don't need to invest in additional cabling or set up extra Wi-Fi gateway points in your hotels and holiday homes to open the doors.

Good access systems for theme parks and hotels are not only welcome from a hospitality point of view: They also increase the sense of security. You know that not everyone can enter a building or a car park. You decide who you grant which access rights and keep an overview of who enters your holiday park or hotel. Modern access systems for holiday parks and hotels that run in the cloud can also be easily controlled remotely. This way you always have a complete overview of all locations.

# Time registration

---

With EasySecure, manual time sheets are a memory of the past. This time-consuming and tedious task now gives way to an efficient automated solution. With the help of a smartphone, a card, a code or a finger scan, you can immediately register who is present at what time. This action is effortlessly at the beginning and end of a break, and at the beginning and at the beginning and end of the working day. The administration no longer needs to keep long lists or to do extra research to check if all the data is data is correct. You can also send the recorded hours immediately to your planning and payroll software.

# Attendance

---

Keeping attendance records is an obligation in the leisure sector. It is important that in the event of an incident, you can immediately see which guests and employees are present in a holiday park or hotel. In the clear and user-friendly EasySecure platform you can see, at the touch of a button, which guests and employees are in a park or building. The presence overview can be accessed directly via computer, tablet, or phone. You can also narrow down the overview dashboard of attendance on one or more personal characteristics. For example, think of workers who have a first aid certificate.

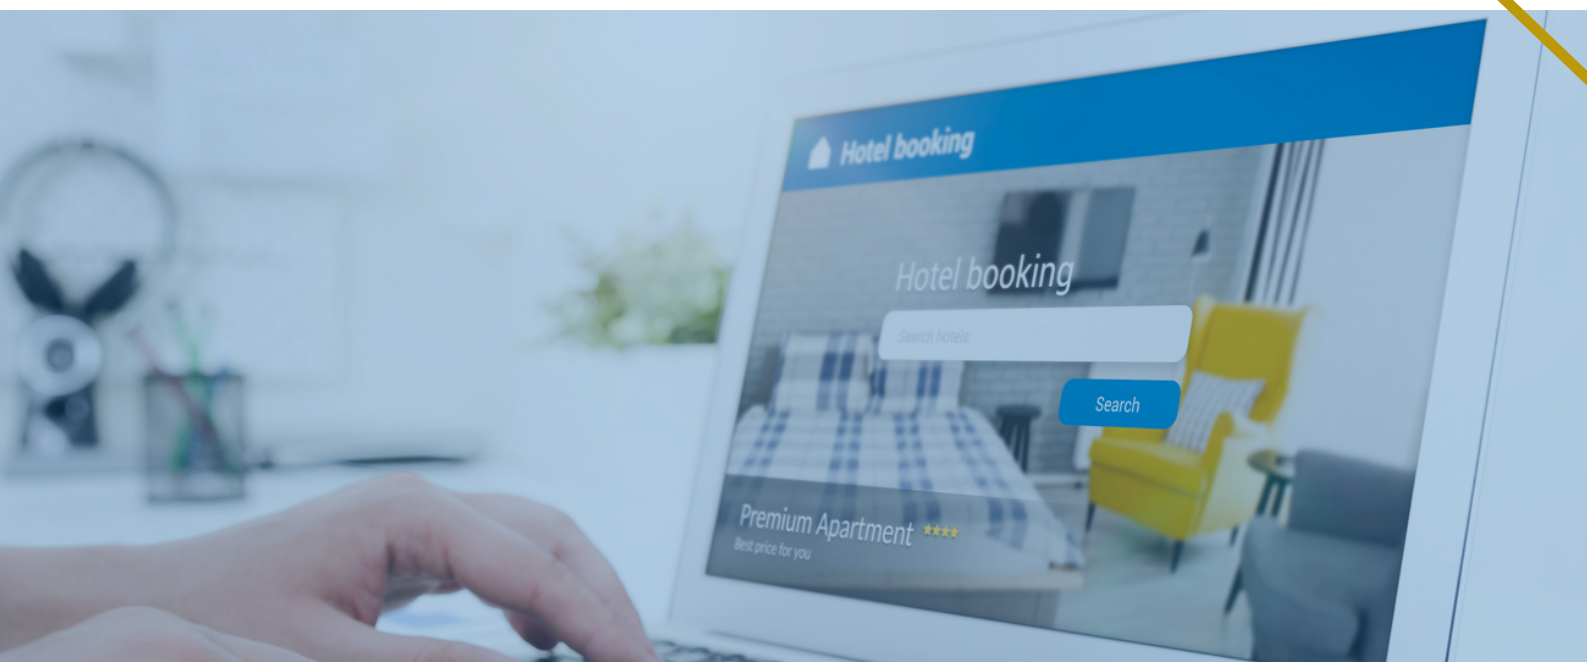

# Integration

---

Because integration comes first at EasySecure, we offer a future-oriented and seamlessly integrated total package of control and security for the leisure sector. Seamless integrations with major and popular leisure software packages (such as Booking Experts, Mews, Stratech and StayNTouch) are part of our "Best-of-BreedVision". This gives holiday parks, hotels or campsites a free choice of software and allows them to continue using the best of several worlds. Being tied to a specific provider is a thing of the past.

Reservations are automatically entered into our software and mobile phone cards are automatically created and sent. This saves guests and staff a lot of time at the front desk. You can easily set up a real contactless pre-check-in or late check-in. With EasySecure, access, time and attendance registration is everything integrated in a single, all-encompassing cloud solution. The EasySecure software can also be integrated with camera software, alarm systems and fire alarm systems.

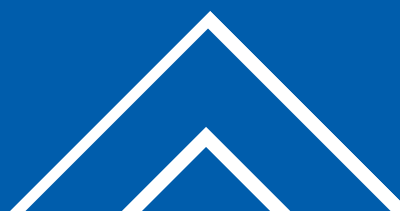

# The advantages of EasySecure

---

With EasySecure, holiday parks, hotels, campsites, and other companies in the leisure sector benefit from an integrated package for control and security.

EasySecure offers among others:

- An all-in-one cloud solution for access control, time and attendance, and visitor management.
- Contactless access to the hotel or holiday park.
- You can choose between access with a smartphone, keycard, tag, pin code, QR code, number plate, finger scan or facial registration. Our software uses the latest OSS keycard standard. OSS is a highly secure encryption standard used by the leading A-brands in the field of wireless access control. This makes the system not only future-proof, but also compatible with different brands and types of hardware.
- Number plate recognition and cameras?
- No problem with our Axis products.
- EasySecure is ready to use immediately. We deliver all solutions pre-configured.
- With EasySecure you have full flexibility. We have several leading hardware brands, all integrated into the EasySecure cloud software. The brands are also members of the OSS Association. With EasySecure you can easily use different brands and solutions throughout the holiday park.
- We supply wireless locks, door handles, cylinders and lockers from DOM Security that meet the highest quality and industry standards.
- Our fittings are burglar-proof and are equipped with the standards SKG\*\*\*, IP65, IP67 and IK08 standards.
- A software package that is simple and easy to manage remotely. You also decide whether users can manage the software only at their own location or also across locations.
- The software integrates seamlessly with more than 80 reservation, HR PMS, WFM, scheduling and payroll packages.
- The EasySecure software uses advanced encryption and security techniques. A high level of security and privacy is therefore guaranteed.
-
