LESS COST & MORE CONTROL

The future is Yource

Yource is the leading provider of customer contact services in the Benelux completed with near- and offshoring facilities within and outside Europe. Yource is specialized in improving customer contact within organizations.

Whatever customer contact need your organization might have, Yource is there. From their recruitment, insourcing and outsourcing locations in the Netherlands, Belgium and Luxembourg and their near- and offshoring facilities inside and outside of Europe, Yource empowers organizations to stay a step ahead of the competition when it comes to personal customer contact.

Solutions

Access control

With more than 30 locations and 12.000 Yource members, managing access control is time-consuming and quite a challenge. There are many changing shifts and employees across the different locations. In addition, an employee can be allocated to multiple sites in any time frame.

Traditional access cards make this process time consuming and unsafe. Access cards must be created and collected physically. In addition, traditional cards are easily lost and passed on. With 12,000 Yource members it is also a considerable expense.

Solution

Yource has asked the Advanced Security Group Netherlands (ASGN Beveiligingstechniek) for a solution for this access control problem. Yource wishes to manage access control remotely without the use of physical access cards.

Flexible registration

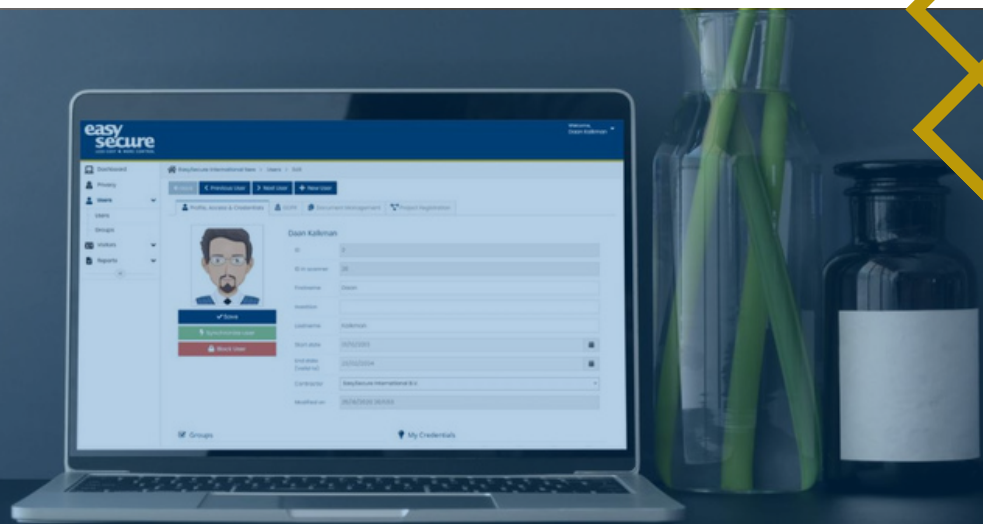

ASGN Beveiligingstechniek has found the solution with the versatile EasySecure platform in combination with mobile registration. EasySecure offers a complete access control platform in the cloud with simple mobile registration. No physical access cards and easy management across all locations.

From the head office you can manage the access control for all locations and the location managers only see their own data. Creating a card is arranged within seconds. With EasySecure Mobile Access you can use your own smartphone as a key to access the doors. Safe, simple and suitable for iPhone and Android devices. By using the smartphone as a key, managing and using an access card becomes easier, faster and safer.

Yource now sends an email from the software environment to an employee to pick up the mobile card. Access control is arranged at the touch of a button. Because you use your own smartphone as a key, you reduce the risk of loss and maintenance costs when replacing access cards.

In addition, users are less likely to hand over their smartphones so that unauthorized persons are prevented from gaining access to the various locations. Registration is personal and flexible

Yource is very happy with the solution offered by ASGN security technology in combination with EasySecure.
