and attendance tracking

# Face the Future: Privacy & Security

Privacy and Security are two themes that are high on the agenda of every company. At EasySecure, both themes are central to our thinking and technological developments. For years, we have been ISO27001 certified and have specially trained employees for services in the field of privacy, GDPR, and Security.

## Easily and worry-free integrate biometrics with guidance from EasySecure.

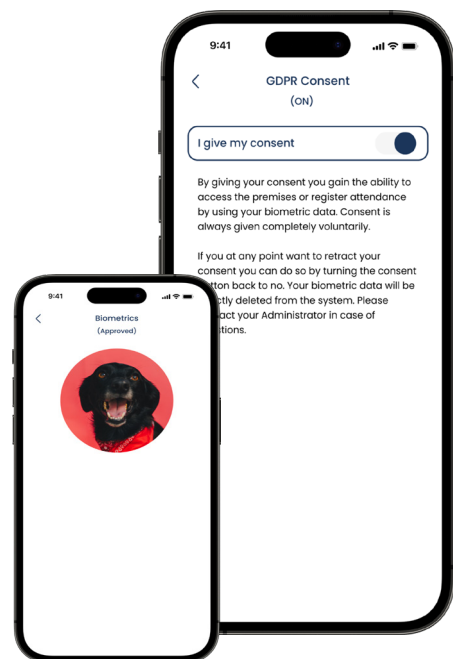

### 1. Conduct a DPIA and assess risks. EasySecure can help with example documents.

The Data Protection Impact Assessment (DPIA) is a tool to identify privacy risks of data processing in advance and then take measures to mitigate the risks. We have developed several documents to help you map the risks and start using biometrics worry-free. A DPIA is mandatory when using biometrics.

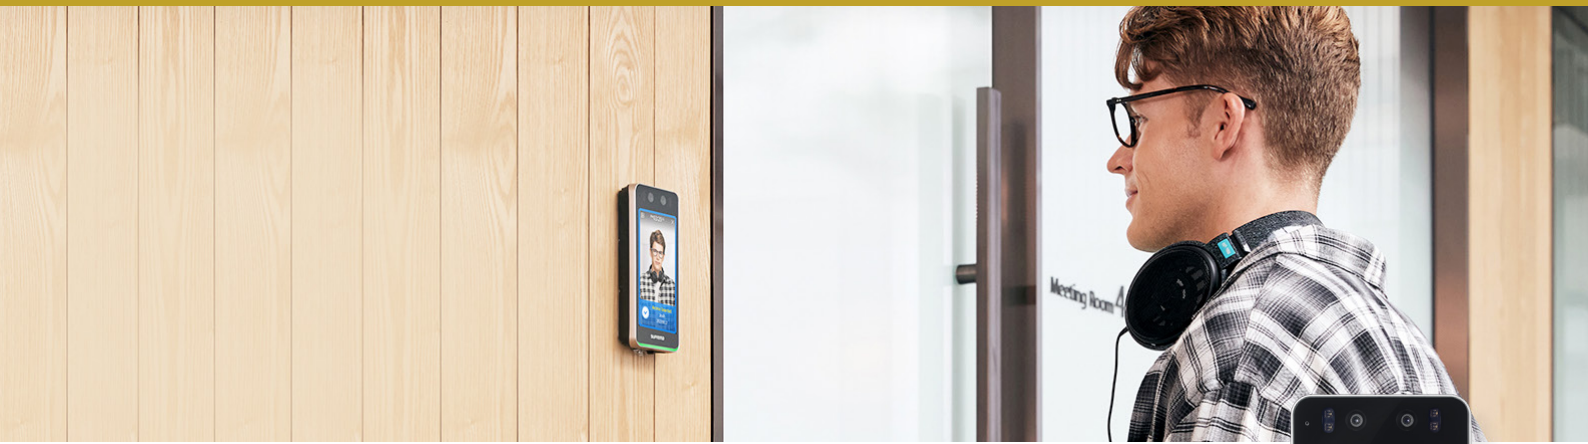

### 2. Transparency to your visitors and staff

The use of biometrics is permitted. However, a strict condition is that you inform your visitors and staff about the use of biometrics and that there is always an option to choose an alternative. The use of biometrics must, therefore, be a completely free choice.

We offer convenience, and our software does not store images of faces, but instead, a photo is digitally converted into an encrypted template.

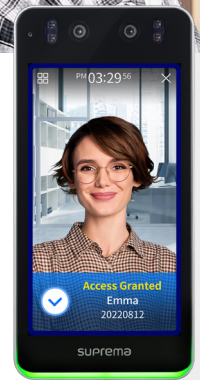

## Safe and reliable with EasySecure.

### 3. Biometrics is allowed when it is a completely free choice.

The choice for biometrics is voluntary and can always be revoked. Consent must also be recorded and documented. EasySecure helps with this by documenting it and giving the user control in a mobile app. So, without a card or bracelet to the swimming pool or private sanitary? Achieve this with EasySecure!

### 4. EasySecure is ready as your partner.

EasySecure helps with all standard documents and information about the system. Our experts are ready to guide you from start to finish. And we don't stop there, because we keep you informed about new developments and releases.

## Why choose biometrics?

- ✓ Convenience
- ✓ Safety
- ✓ Time-saving
- ✓ Cost-saving
- ✓ Real-time dashboard with information
- ✓ Integration possibilities with various components
