LESS COST ☾ MORE CONTROL

The ultimate contactless access control guest journey for campsites and vacation parks.

Complete control of access, time and attendance records for a great vacation experience.

The ultimate experience for your guests with EasySecure.

Tourism and recreation are sectors that not only represent a solid economic value (entrepreneurs from the broad hospitality sector are responsible for some 96 billion in 2022 and 105 billion in 2023 turnover, boosted by more than 800,000 jobs): they are also industries that make a contribution to the quality of life that should not be underestimated by providing the much-needed portion of enjoyment and relaxation that every human being needs at his or her own time. This includes an optimal experience where your guests no longer have to sign in at the reception desk. They do so via their own smartphone, badge or unique pin code.

Suitable for one lock on one door to tens of thousands of locks in multiple locations. All in one overview.

Benefits EasySecure

- Easily assign access to individuals
- Integratable with your own software
- Multiple locations in one application
- Your guests register in advance
- 24/7 insight into time and attendance
- Cost saving

Why EasySecure?

Checking in, without going past the front desk

Your guests have been eagerly awaiting the weekend getaway. Upon arrival, there are long lines in front of the reception desk, turning the pleasure into irritation. That's a thing of the past! Let your guests check in directly via your own app! They immediately receive all the necessary information and can skip the lines at the reception! This allows your front desk staff to take care of guests again, as they should!

Direct access to facilities

Upon arrival at the vacation park, your guests drive directly to their own vacation rental. Carefree and without an access pass directly to the swimming pool, where they gain access with facial recognition or a unique code. Never again a wristband or key that gets lost!
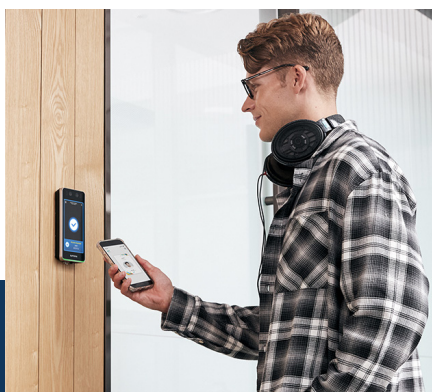

Different access options

Expand your current access control system and control more doors with your existing (mobile) access cards and EasySecure software. Replace existing door handles and cylinders for our wireless system and take security to the next level without additional wiring. Be it mobile pass readers, license plate readers, PIN code boxes or face recognition. With EasySecure, you will find the right solution for your situation.

Insight anytime, anywhere

With EasySecure Cloud software, we offer one package for your access, time and attendance registration at one or more locations. This way, you maintain an overview and employees and guests can move around effortlessly. Always and everywhere an up-to-date overview of who is in which room.

Integrate with your own software

Integrate your own software with EasySecure Cloud and experience the convenience of technological innovation within your own applications.

EasySecure.
The proven, international solution in the world of vacation parks and recreation.

An indelible impression with your own software and EasySecure.

How nice would it be if you had a set of solutions that were completely tailored to the industry-specific challenges of the recreation industry? A system that also operates as one, so that access control, time registration and ultimate hospitality come together in an integrated solution that you can manage centrally without any problems.

Hospitality is second nature to organizations within the recreation industry. It is important that guests feel at ease right away when they arrive at the entrance to your resort. A visitor-friendly entrance system is an ideal way to make a good first impression. Do you want to avoid guests ending up in a long line for the barrier when they arrive at the parking lot? Or do you want to give them the opportunity to walk straight to their cottage without first filling out a mountain of paperwork at the reception desk? Then an access system from EasySecure offers the solution.

Register the guest in your cloud environment and immediately send a mobile access card via e-mail. Once your visitor arrives, he or she can use a mobile card (keycard), QR code, finger scan, license plate or facial profile (a personal photo is converted into a secure facial template) on the smartphone to access the cottage or the various facilities on a property or in a building.

Face the Future with EasySecure and transform the access experience within your resort.

Want to know more?

Contact us today and find out how we can make your park safer, smarter and more efficient.

Save time and money.

A vacation park has various facilities. There are many different areas such as the vacation homes, the swimming pool, as well as technical areas.

- ✓ Digital recording of hours, payroll and payment with dozens of integration options.
- ✓ Easily grant or exclude access.
- ✓ GDPR-proof according to legal requirements.
- ✓ User-friendly and accessible to all.
- ✓ More security, less worry.

This is what the ideal Guest Journey looks like

Before the vacations really start

Your guests are eagerly awaiting the recently booked vacation. Leading up to the visit to your accommodation, the main booker can already look up information about the park in your own app. On the way to your accommodation, the children are having a great time in the back seat and are eager to take a dip in the pool. Upon arrival, there is quite a line at the check-in desk. That's a hefty setback and false start to the vacation, right? Fortunately, that's in the past!

Assigning access to your guests

In the app it is possible to prepare digital keys for your guests. You easily organize the management of access to the booked accommodation, private sanitary facilities and wireless access to the swimming pool or playground. Thanks to various access options, you have a choice of facial recognition, a PIN code or the use of a QR code.

> "EasySecure helps to further optimize the customer journey. Our guests can now drive straight through with peace of mind and have access to the indoor playground and swimming pool. Guests are truly taken care of."

Face the Future: Privacy & Security

Deployment of biometrics according to the GDPR!

Privacy and Security are two topics, which are high on every company's agenda. At EasySecure, both themes are central to our thinking and technological developments. For years we have been ISO27001 certified and have specially trained staff to provide services in the areas of privacy, the AVG and Security. Here's how EasySecure can help you!

View our entire brochure on Face the Future.

"We no longer wanted keys and pool passes in our accommodations. At the same time, we wanted to give our guests direct access to the accommodations, without having to check in at the front desk first. EasySecure provided an integration capability with facial recognition, which allowed us to realize our desire."
