About Tommy Booking

Tommy Booking is the platform many holiday and recreation parks use to make bookings. It is one of the major players in this segment. Is a guest making a booking online? Then the reservation is received by Tommy Booking, and the park manages the booking and all customer data in the system. Tommy Booking optimizes (complex) business processes of recreation companies and thus improves the guest experience.
About EasySecure

EasySecure is a specialist in the field of identity management. EasySecure's scalable cloud platform delivers and integrates access control, time, attendance, and visitor registration solutions. Users can choose from wireless cylinders, wireless door fittings, wireless lockers, card readers, keypads, license plate registration, finger scans, and facial recognition. Registration is possible via mobile phone, card, tag, face, finger, license plate, or code.

Troubles with keys

Working with keys and cards is an error-prone and time-consuming process. For example, when guests lose their keys, you need to make new ones and maybe even replace the locks. The same goes for when new people join the team. In addition, many companies need a better link between reservation systems and solutions for identity management to reduce the risk of double data entry.

Using separate keys and cards is cumbersome for hotel and holiday park visitors. They must first visit the reception and, in most cases, wait before they can access their hotel room, holiday home, toilet blocks, sanitary facilities, or other park facilities (such as the swimming pool).

Ultimate guest experience with unique contactless check-in

By combining Tommy Booking and EasySecure, you link booking management to a secure and user-friendly access management system. The link automatically converts a booking into a digital key. Both solutions become one, as it were so that you will never again struggle with managing separate keys and access cards.

Guests can access the holiday park, the booked holiday home, toilet blocks, private sanitary facilities, or other park facilities without visiting the reception. Organize this contactless access easily with the guest's mobile phone, a unique pin, QR code, or license plate number. Or simply grant access by using the guest's face. In the latter case, a personal photo of the guest is converted into a secure face template.

The result is the ultimate guest reception experience. The guests can use the facilities while waiting for their holiday home to be ready. The administrator can optionally open doors remotely from any location and link to different reservation systems. And the reception employee once again becomes a real host.

For our option to open the current doors with a smartphone, no further investment in cabling is necessary. Instead of installing extra Wi-Fi gateway points in the vacation home, you only need to replace the current cylinder. The system is plug-and-play and fully prepared. The receptionist becomes a true host again instead of an administrative desk clerk.

Thanks to the combination of Tommy Booking and EasySecure, recreation and holiday parks benefit from various advantages:

- Personal access control, time registration, attendance, and visitor registration in a traditional or innovative way

- Create a completely contactless check-in without the intervention of the reception

- Use the smartphone as a digital key

- No more struggles with keys and, therefore, more security, control, and overview;

- Easily manage (multiple) locations in the cloud;
