Biometrics

Biometrics is known for its innovative characteristics and recognition of personal characteristics. Everyone always has the biometric features with them. Hence, many of our solutions are based on biometrics. Our biometric solutions are safe and reliable according to the GDPR legislation.

Wireless locks

The use of wireless lock technology has increased significantly in recent years. Digital keys are cost effective, with wireless locks now offering the same capabilities previously only available through wired doors at a much lower cost. The locks can be installed quickly and efficiently on existing doors.

Multiple locations

In addition to small-scale use, our solution is also very suitable for organizations with multiple locations. For example, chains with multiple branches, where the head office has control over the locations and the location manager only has control over their own data.

Need more information? Contact us

ACCESS CONTROL

Access control must be easy, simple and above all safe. In combination with our software you can choose from finger scans, face recognition, card readers, code panels, wireless cylinders and wireless door fittings. Access is possible via face recognition, finger scan, smartphone, card, tag, license plate and / or code.

Modern access control is a combination of an integration with access control, security cameras, time registration, lockers and / or alarm systems. Our basic package is flexible and lays the foundation for later expanding to your needs regarding access control or other solutions that we offer.

Registration and access with:

Mobile card (NFC and BLE)

Finger scanner

Facial recognition

Cards

Code

Licence plate registration

Pros

- Easily assign access to people
- Can be integrated with own software
- Multiple locations
- Register visitors in advance
- Management in the cloud
- Cost saving

TIME REGISTRATION

Our solutions guarantee a good, accurate and easy registration. That is often the ideal basis for the start of a perfect time registration. Accurate per second. Registration of personnel or visitors is possible with smartphone, card, tag, code and biometrics.

With the appropriate rights, everyone is provided with the correct information. For example, HR sees how many hours an employee has been present. A department manager wants to know how many hours have been worked in his department. Many organizations have now discovered the convenience to great satisfaction. The solutions are cost efficient and have a high return on investment.

Smartphone as clock-in system

Time registration with the mobile phone has become increasingly popular in recent years. The mobile phone can be used as an access card for registration. Since people use their own smartphone as a key, this reduces the risk of loss and maintenance costs. In addition, users are less likely to hand over their smartphones. So you are assured of correct time and attendance registration. You can easily register your employees from your software dashboard.

Registration and access with:

Mobile Card (NFC and BLE)

Cards

Finger scanner

Code

Facial recognition

License plate registration

Integration

EasySecure International is a specialist in the correct time registration. From a simple Excel document to full cloud integration for planning, time and pay.

Pros

- Management in the cloud
- Multiple locations
- Always available
- pre-registration
- Safe

ATTENDANCE REGISTRATION

Attendance overviews are a legal obligation for many organizations. Our solution is quick and easy to implement. You can register attendance on the basis of biometrics, mobile phone, card or PIN. This can be done across different locations and different departments.

By using our cloud software, you no longer have to look at a board, but everyone can see it on their own PC, tablet or smartphone. Management, the receptionist as well as someone working in the warehouse can check the presence.

In addition to presence, Easy Secure can also provide real time information, such as which emergency team is present. Moreover, other qualifications, such as certificates and references, can be assigned to a user and accessed under a general overview.

VISITOR REGISTRATION

A new visitor within your organization can only get a first impression once. The registration form on the desk is currently standard, but not very friendly to your visitors. Immediately upon arrival, they have to note their details, which are almost always already known. In addition, everyone can view the (personal) data of previous visitors by taking a look at the paperwork on the desk.

A visitor can be registered in various ways: via a web page in your own house style, from your software dashboard or via a tablet or touchscreen at the reception.

Create a pass for the visitor via mobile or hand out a card. Visitor registration can also be combined with license plate registration.

PROJECT REGISTRATION

With our project registration, we ensure fast and accurate provision of information. We know better than anyone how important this is for project-related companies.

Our project registration makes it possible to register hours on projects, sub projects or customers and projects, and an activity. The bookings are online, thus all overviews are up to date at any time of the day.

The booked hours can easily be sent to your ERP package via our software. Your employee reports to a scanner and can be registered via a smartphone, card, code, finger and / or face. The employee can only register for current projects, on which he is allowed to book and only for the assigned activities.

Integration

EasySecure International is a specialist in the correct time registration. From a simple Excel document to full cloud integration with your ERP package.
